

ESPRÉVA

PRECISION ENERGY FOR MODERN SKIN

FROM COFFEE GROUNDS TO COSMETIC INNOVATION

This serum contains CaffiCell™ – a biotechnology-derived active ingredient obtained from upcycled coffee biomass, developed in Latvia.

Coffee grounds that would otherwise become waste are transformed into a high-value cosmetic ingredient, designed to help restore skin energy, support protection, and promote renewal.

WHAT IS CAFFICELL™?

CaffiCell™ is an active cosmetic ingredient derived from Virši coffee grounds using optimized extraction methods developed by Alternative Plants.

During the research process:

1. biologically active compounds are recovered,
2. their effects on human skin cells are studied,
3. new applications in cosmetics with energizing and anti-fatigue benefits are explored.

POWERED BY VIRŠI COFFEE
EXTRACT, TESTED IN
COLLABORATION WITH THE
UNIVERSITY OF LATVIA.
